

# Sustainable Development

# Eco - efficiency – ISO 14001

At UPC we are highly aligned with the latest trends in sustainability. Our environmental management focuses on the search for eco-efficiency. As can be seen, most of our procedures use this concept, as our institutional environmental objective is to become an eco-efficient corporation. This is how we contribute to our fight against climate change, reducing our general energy consumption. An instructional manual was proposed setting up the necessary guidelines to make efficient use or consumption of resources, and prevent environmental contamination or resource depletion.

#### **OBJETIVOS AMBIENTALES UPC**

La Universidad Peruana de Ciencias Aplicadas aspira a ser líder en la educación superior en el Perú y a ser reconocida internacionalmente por su excelencia académica y por su contribución permanente a la solución de los problemas de nuestra sociedad.

Es por ello que se compromete a través del Sistema de Gestión Ambiental a cumplir con los siguientes objetivos:

- Mantener las actividades educativas alineadas al principio pedagógico de "aprendizaje hacia la sostenibilidad" del Modelo Educativo UPC.
- 2. Implementar programas de medición y mejora de su huella ecológica.
- Garantizar que los efluentes generados no sobrepasen los valores máximos permisibles por la normativa vigente.
- 4. Gestionar el consumo eficiente de los recursos agua, papel y energía eléctrica.

#### REQUISITOS AMBIENTALES PARA COMPRA DE PRODUCTOS

La Universidad Peruana de Ciencias Aplicadas - UPC, asume su compromiso con el Medio Ambiente y por tal motivo, el área solicitante antes requerir y/o solicitar productos al área de compras, deberá tener en consideración lo siguiente:

- El proveedor debe ofrecer productos y servicios que minimicen la generación de residuos y/o faciliten su valorización, aprovechando los recursos en forma sostenible y reduciendo al mínimo su impacto sobre el ambiente. Asimismo, son responsables de participar en las etapas del ciclo de vida.
- Los productos químicos, de limpieza y/o de aseo, deben ser entregados con sus respectivas hojas de seguridad.
- Firma de la Carta de Compromiso Ambiental emitido por UPC.

# Sustainable Organizational Management

Responsible organizational management is focused on two main issues: to reduce the environmental impacts of our operations and the implementation of an environmental culture throughout the university; and to promote inclusion and equality in the university community and with all of our stakeholders.

## **Waste Segregation**

This project began at the San Miguel campus and was progressively extended at all campuses. We currently have bins to segregate paper, plastic, and glass waste, which are delivered to outreach organizations to benefit vulnerable populations.

## Eco-Efficient Technologies on Campus

## ENERGY

We have a software at the Monterrico and Villa campuses that verifies energy consumption with informs and reports in a real way. Thus, electricity consumption peaks can be identified to carry out the pertinent corrective measures and optimize consumption. Energy Consumption (KwH) 293.06 per person per year.

### WATER

At our campuses we have energy-saving taps and waterless urinal technology saving 40% of consumption. Additionally, we are implementing a project to standardize and change LED lighting at campuses. Doing this, we will reduce the electricity consumption and emission of greenhouse gases.

Water Consumption (m3) 2.84 per person per year.

Campus	Reciciaje de Residuos				Consumo	
	Papel (Eg)	Cartón (Eg)	Plástico (Eg)	Aceite de Cocina (L)	Consumo de Energia (Kw.H)	Consumo de Agua (m*)
Monterrico	3080.00	470.00	19500	189500	4 171 507271	54 692.00
San Isidro	4003.00	1007,00		127500	2 039 939 20	21,977,00
Villa	5468.00	3281.61	211940	109500	4.941.479.80	60.944.00
San Miguel	3949.00	2178.00	5100	88000	2 040 872 24	13 625:00
Totales	26 500.00	6936.61	2465.40	\$145.00	13 194 178.92	150 838.00

## **Aniquem - UPC Agreement**

A cooperation agreement was made between UPC and the Association to Help the Burned Child (ANIQUEM) to donate recyclable waste.

This agreement consists of recycling and storing plastic, paper and cardboard waste; once we collect approximate 250 kg of waste, ANIQUEM is informed to pick up the waste from the different campuses.

The 2019 waste management made possible to recycle 26.500 kg of paper, 6.936,61 kg of cardboard, and 2.465,49 kg of plastics and to deliver these to ANIQUEM, which obtains funds from their sale to companies reprocessing waste.
